The age-related changes in the in vitro assay of human gametes were examined by the use of 46 sperm donors from 28-58 yr of age. The frequency of motile sperm cells was decreased with age. The percentage of acrosome-reacted spermatozoa increased significantly with age. The fertilizing ability of spermatozoa did not differ with age. However, the cleavage rate was lower in oocytes from older donors. The influence of this age-related decrease in fertilizing ability on the fertilization rate was less than that of the decline in sperm motility and acrosome-reacted spermatozoa. The results indicate that in vitro fertilization can be successful in older sperm donors, but the probability of pregnancy declines with age.Breadcrumb Cover Letter - A step by step guide to writing a cover letter So, you've done it. You have your cover letter together, just like it's supposed to be. Now it's time to do something about it. I'm not going to lie: this might be the most difficult step of the whole application process. If you've done everything right, and wrote a cover letter that shows you've done some research, and written in a professional manner, and not taken it to far, this step is a piece of cake. But if you've messed up on any of those little things, well, then this step is going to be a lot more difficult
