the ability to generate detailed building information models including topology and geometry, seamlessly connect and merge any BIM file, natively build lighting models and viewports, and handle integration between any industry-standard modeling program, whether that is AutoCAD or Revit. BIM 360 represents a breakthrough in BIM software, with one unified platform, one workflow, and complete compatibility with Autodesk BIM 360 compatible tools, including AutoCAD, Revit,

Inventor, Bentley MicroStation, and Civil 3D. BIM 360 is designed to handle the complexity of today's projects with ease, and is developed with the goal of meeting the needs of every category of BIM user, whether you are an architect, interior designer, MEP engineer, developer, or facility manager. BIM 360 gives you the ability to work on any scale, at any time, from anywhere, in any application, on any device, to get results instantly. BIM 360 fully complies with the BIM Level 1 version 1.2.1

specification, and has an interactive view model that matches the specification on the build. With BIM 360, you can work in any application with the complete freedom and productivity of an integrated environment. BIM 360 includes: • The ability to do virtually everything you can in Revit or other BIM applications • An interactive view model of the build that matches the specification on the build • The most comprehensive documentation of any project to date BIM 360 is a

complete Revit solution. It can be used in conjunction with other applications for ultimate flexibility and productivity, and includes features not offered in other BIM applications, including: • BIM 360 manages the highest level of detail in the BIM data hierarchy, while remaining extensible, based on AutoCAD standards • BIM 360 is a native Revit file format, enabling a fully integrated experience for BIM users • BIM 360 manages more than 400 version control tags, enabling the

The C++ programming language is the native programming language of AutoCAD Free Download and is used in version 2013, although this is not to be confused with Autodesk's native software development language, AutoLISP. the value in the datetimepicker to be updated (ie to be equal to the current datetime). How can I do that? So far I have this: var dateTime = new Date(); dateTime.setDate(dateTime.getDate() - 1); var datePicker = $('#datetimepicker'); datePicker.datetimepicker({ format: "dd-mm-yyyy", locale: "de" }); datePicker.val(dateTime); datePicker.change(); But this doesn't work. Thanks! A: You are missing the open method in datetimepicker. See here: The "open" method is called when the

input is opened and is where you can change the date or time. The DateTimePicker open method takes a date object, so if you were changing the date on that day you could do this: var dateTime = new Date(); dateTime.setDate(dateTime.getDate() - 1); var datePicker = $('#datetimepicker'); datePicker.datetimepicker({ format: "dd-mm-yyyy", locale: "de" }); datePicker.val(a1d647c40b
