Overview of AutoCAD The history of AutoCAD was marked with several lines of development, including the introduction of computerized design, enhanced capabilities, or changes to the AutoCAD suite. The history of the initial AutoCAD series began in the 1970s. The first version was introduced in November 1982, with a subsequent upgrade called AutoCAD 2.0. AutoCAD was primarily designed to meet the needs of architectural and construction firms that had been migrating from the use of x-y plotters, before the introduction of a wide variety of handheld graphics devices. In 1985, Autodesk introduced its in-house, solution-oriented architecture for the company's software product offerings. This system included a mainframe software backbone, a cluster of distributed nodes, and a communications cluster, each of which was backed by a set of databases. The move allowed Autodesk to focus on core engineering capabilities, while moving product development to an autonomous organization in suburban San Rafael, California. The initial development took place at the San Rafael location, but it has subsequently relocated to several other sites. Autodesk introduced the concept of the Autodesk solution in 1988. A subscription-based offering, the Autodesk solution covered a wide range of software, including certain architectural tools, engineering

The Life Orientation Test-Revised (LOT-R) has been developed to assess dispositional optimism in Spanish-speaking populations, but no studies have tested it with college students. The aim of this study was to translate the LOT-R into Spanish and validate it for use with a sample of college students. A cross-sectional study was performed using 400 college students (175 men and 225 women, ages 18-30 years). The students were administered the Spanish version of the LOT-R (LOT-R-S) and the Spanish version of the Beck Depression Inventory (BDI-S). Internal consistency (Cronbach's alpha) was 0.89. Convergent validity (Pearson correlation) was 0.53 (p0.05) with the BDI-S. Factor analysis of the 14 items showed a three-factor solution: Tolerance 2.62, R2=0
