Navigate to the following folder: %AppData%\Autodesk\ Copy the files we found on our system to the folder above: Keys.db Curves.db Rectangles.db Oval.db 3D.db Vectors.db Execute the executable file: Autocad -q and wait a moment. Click "Show all autocad features". Close Autocad. Test To test the keygen, type these commands in the Command Prompt window: Copy the files found in step 3 above to the following folders (including the.exe file): %AppData%\Autodesk\Autocad\ %AppData%\Autodesk\Desktop\ Save it as autocad.exe Run the Autocad.exe file, when prompted, agree with the EULA. Re-install Autocad Execute the autocad.exe file to re-install Autocad. (This would be an absolute last resort, but if you really want to re-install Autocad, and you have a valid license key, then this is the way to do it.) You should be able to download a license key from Autodesk's official website, then re-run the.exe file to re-install Autocad. Warning: If you have ANY Autocad license, even a key you bought at a garage sale, you MUST have a valid subscription to Autodesk to re-install Autocad. The reason is that Autocad stores license data in a file located in C:\Program Files\Autodesk\Autocad, called "Autocad.license.in.dat". If you remove this file, Autocad can no longer recognize your Autocad license key, and thus you must re-install Autocad. If you are not a subscriber, then the Autocad.license.in.dat file will not be there, and you can safely ignore it. If you do not have a valid Autodesk subscription, you must first go to Autodesk's website, go to Autodesk Registration, and create a new account. You must then download the "Autocad.exe" file from the Autocad Download page. You then download and install Autocad
