64-bit operating system features a.Q: How
to check if the WebBrowser control is a
trusted URL I'm creating a.NET desktop
application in which I need to access a
website (it's a payment site). I wrote the
application using Windows Forms. In order
to generate the necessary items to perform
the transaction I must check if the site is
really trusted. So my question is: how can I
check if the WebBrowser control is a

trusted page? Thanks. A: You could use the IsTrusted property of the HtmlDocument.

```
WebBrowser b = new WebBrowser();
```

```
b.Navigate(url); if (!b.IsTrusted) {
```

```
MessageBox.Show("Untrusted site!"); } The
```

present invention is related to the field of

light weight containers and, more

particularly, to a light weight container of

the "clam shell" type. Conventional fishing

clamshell containers are constructed of two

halves that are hinged together along one

side edge so that they can be opened and

then folded over one another to form a

container for trapping and storing a fish.

The halves are usually constructed of thick

metal to withstand the rig
