References External links Autodesk official website Category:Products introduced in 1993 Category:AutoCADThe present invention generally relates to a bandage which is made from a film of flexible, non-self-sealing material, is wound over a contour and applied to a wound site, and is sealed to the wound to protect the wound site from external influences. The present invention is particularly directed to the use of an anti-microbial agent, such as an anti-microbial agent known as norfloxacin, in the film. The present invention also relates to a method for applying the bandage to a contour and to a method for sealing the bandage to a wound site. In recent years, the use of bandages for the treatment of wounds has become widespread. Bandages are applied by health care professionals and the lay person alike. Bandages for the treatment of wounds may be applied in conjunction with a medication, such as an anti-bacterial agent, which is used to treat the wound. While the anti-bacterial agent is effective, the agent may not be entirely absorbed by the wound. This may occur because the bandage used to treat the wound, even if it has a reservoir to receive the agent, may not be permeable to the anti-bacterial agent. When the agent is not absorbed by the wound, it may enter the bloodstream and cause a variety of unwanted side effects, such as nausea and fever. Thus, it is desirable to provide a bandage which is permeable to the anti-bacterial agent and which will absorb the agent and permit it to be absorbed into the wound. Additionally, the anti-bacterial agent will eventually, over time, tend to be depleted from the bandage. This is because the anti-bacterial agent may be deactivated by exposure to air, sunlight, water, or enzymes. This leads to the need for replenishing the agent in the bandage. As disclosed in the parent application Ser. No.

Many users rely on AutoCAD's industry-specific application suites for prototyping, visualization, layout, and manufacturing. AutoCAD provides the industry-specific modeling and collaboration tools that enable the success of their design teams. Along with productivity enhancements, AutoCAD LT 2020 is the first version of AutoCAD to include the Markup Import and Markup Assist features. You can view, import, and edit drawings directly from other programs without creating a new drawing. Use the AutoCAD Markup Assistant to quickly add, edit, and remove content from a drawing without opening an additional drawing. Markup Import and Markup Assist lets you: Import an alternate design into the current drawing using your favorite markup format, including color-coded text styles, dimensions, and datums. Automatically extract content from your text, dimensions, datums, and footprints, allowing you to keep them separate in the current drawing. Edit without creating a separate drawing by updating the attributes of the imported content to match the properties of your current drawing. Edit and save changes to a separate working file
