The AutoCAD drawing is called a "model" (a template if you will). When you draw in AutoCAD, your drawing is called a "drawing" or "drafting." You can build, print, export, and publish to the Web or mobile devices. The drawing can be created, edited, and previewed on a computer. No drafting table or even a piece of paper are required. Unlike many software applications that can be costly or time-consuming to learn, AutoCAD is free for personal use. In AutoCAD, a model is created, composed, edited, and published to the Web or other output formats such as e-mail, or exported to a particular format such as DWG, DXF, DWF, or PDF. In addition to creating a model, the user can open another drawing in AutoCAD, create an editable copy of that drawing, and then work on that copy. The drawing can be attached to other drawings, and then the attached drawings can be saved in the format of choice. There are many other ways to work with drawings as well. As in most computer-aided design and drafting (CAD) applications, when you draw in AutoCAD, the drawing is called a "drafting." You can draw in 3D view and wireframe, 2D and 3D styles, and create your own styles. In addition, you can add dimension and annotate. You can also create viewports and work in "show" view. You can also send models to others by e-mail, e-mail attachments, or through the Web. You can also import from other drawing applications or file formats. A key benefit of AutoCAD is the ability to work in several styles. These styles include 2D Drafting, 3D Design, 3D Wireframe, Hidden Line, Hidden Face, Hidden Edge, Hidden Surface, and Hidden Edge. You can also create your own styles for drawing objects as needed. In AutoCAD, drawing (a drawing is a template) is composed, edited, and published to the Web or exported to the desired format. AutoCAD is written in the C++ programming language. The software is available in the 64-bit version as well as the 32-bit version. The software is available in two versions: AutoCAD LT and AutoCAD LT 2020. AutoCAD
