More particularly, it relates to an information processing method and apparatus for managing the contents recorded on a recording medium by an application program used to play back the contents recorded on the recording medium. In the conventional information processing apparatus, a plurality of programs are stored in a memory as application programs for playing back information such as the contents recorded on a recording medium such as a compact disk (CD) or a magneto-optical disk (MO) (hereinafter referred to as "CD-ROM"). However, since the individual programs are stored in the memory as they are, they cannot be loaded into the memory until they are used, and the entire CD-ROM cannot be played back unless all of the application programs are loaded into the memory. The object of the present invention is to provide an information processing method and apparatus that allows a user to use one of the application programs stored in a CD-ROM without loading all of the application programs into a memory.Friday, December 9, 2013 Grammatical Manoeuvres Language is one of the most interesting aspects of this world.
