of Memories Amnesia: Rebirth of Memories (stylized as Amnesia – Rebirth of Memories), is an action-adventure game developed by Frima Studio, published by Focus Home Interactive and released for Microsoft Windows and Linux on October 24, 2015 in Europe. The game is the fifth release of the Amnesia series, preceded by 2012's Amnesia: The Dark Descent. Rebirth of Memories is the first game in the series developed by Frima Studio and published by Focus Home Interactive since Frima Studio was split-up in 2013 by I-Novae. As a result of the studio's restructuring, Frima Studio developed the 2015 edition of The Dark Descent instead of Amnesia: Rebirth of Memories. Set in the city of Mapula, the player controls the eponymous 'protagonist', an investigator for a secret government organization who suffers a traumatic brain injury during a routine mission. This causes him to undergo a series of hallucinations where he has to piece together the reality of his surroundings, aided by a mysterious red liquid. An episodic release pattern sets the player off on a journey to uncover the red liquid's purpose and its origin. The first season has five episodes to be released, concluding with episode five on January 26, 2016. After that date the game moves on to the second season, with the first scheduled release on December 30, 2016. A limited edition of the game came packaged with an art book and two art prints by French artist André Amar, the last two pieces of which function as key unlocks. An extensive user-made modding community was created since the beta test, with two major game modifications released in December 2015 and January 2016. Gameplay Gameplay in Amnesia: Rebirth of Memories alternates between free exploration and "active" gameplay where the player is moved around by the game's impaired protagonist. The game is played in the third-person and features an over-the-shoulder camera viewpoint, allowing the player to follow the character's movements by looking in the direction they face. Under normal conditions, the player starts off in a position behind the character's viewpoint, limiting their movement. If the player takes control of a button by pressing the directional button, their camera will zoom out to follow the player character. Buttons and controls can be accessed with the keyboard or the mouse. The game is played from a third-person
