Installation notes ----- A user needs to have the service account email (the account you wish to run the install command with) already associated with the Autocad service on his/her machine. This will prevent the installation process from requiring him/her to log into Autocad after installation. The installation process creates a key/password pair for the Autocad service account. This key/password pair will be required by the Autocad service at runtime. To complete the installation process, the user needs to replace the key/password pair with the key/password pair of his/her own key/password pair. Installation and activation ----- To complete the installation, the user has to perform the following steps: 1. Run the install.py script located in the installation directory of Autocad.
