Epigastric and left hypochondrial tenderness were present. Abdominal ultrasound showed a 7.5 cm sized heterogeneous echogenic mass in the region of the left hepatic lobe laterally, filling the left renal and gonadal veins, extending anteriorly, and pushing the gastrohepatic ligament posteriorly. This was highly suggestive of a neoplastic lesion and the patient was taken up for exploratory laparotomy. On exploration, an 11 cm × 8 cm × 5 cm tumour lesion present in the dome of left liver, extending from and compressing the hepar and phrenicohepatic ligament, was excised ([Fig. 1](#F1){ref-type="fig"}). Hemorrhage was present owing to the size of the lesion with the use of electrocoagulation and the bleeding was stopped. The patient is free of pain and undergoing regular follow-up, 30 months after surgery. ![Excised 11 cm × 8 cm × 5 cm tumour lesion present in the dome of left liver](IJMR-147-429-g001){#F1} On histopathologic examination, the lesion was diagnosed as spindle cell sarcoma, showing elongated spindle cells, arranged in a wavy/interlacing pattern \[Fig. [2a](#F2){ref-type="fig"} and [2b](#F2){ref-type="fig"}\]. Sarcoma, rarely present in the liver, presents as a huge mass and needs to be differentiated from the other forms of metastatic sarcoma. The cause of sarcoma in the liver is unknown

I want to group by Month so I can see what happened in each month. I have the Month and Year already, so it would be easy if the cube had a Month dimension in it. Unfortunately, it does not. In the 'filtered view', I want to see the details of that month. For example, in the filtered view I should see 3 rows, the sum of 8X in Jan for each, the sum of 7X in Feb for each and a sum of 2X in Mar for each. Can I make it so that I group by Month in the view and see the previous Month's data? A: I found this topic really interesting and I think it help's answer the question "Can I group by month" So here it is: I hope it helps "I know

It is easier to make a recipe a bit healthier, but it has to be tasty. Part of it is discovering what she is willing to have. She actually requested this cake. Studies on the role of annexins in cell-to-cell adhesion and cell-matrix adhesion are reviewed with particular focus on the structures involved in these processes. Expression of annexin II (Anx II) is associated with invasive and/or metastatic capacities of a number of tumor types. Anx II is expressed in the invasive and metastatic cells, and not in normal cells. The N-terminal head-group of Anx II is known to be critical for the local organization of the phospholipid plasma membrane, and a head-group modification affects growth and survival of tumor cells. A recent biochemical study has demonstrated the presence of membrane bound calcium directly by Anx II. These findings suggest that a modification of the Anx II head-group can function as a novel mechanism modulating cell-matrix adhesion as well as cell-cell adhesion. These findings further suggest that Anx II might be an independent variable for the attachment and growth of tumor cells. The other members of the family of annexins, Anx I and V, have a distinct distribution pattern in the cell, suggesting that the functions of Anx I and V may be different from those of Anx II in cell-cell or cell-matrix interactions. This article will update the knowledge of the structure-function relationship of annexins.Getty Images Seahawks coach Pete Carroll expects Malik McDowell to return to school and finish his career somewhere other than with the Seahawks.
