Eptar Reinforcement 1. Every script type has its own editor window, and every script runs in its corresponding ARCHICAD context.Q: How to display a list of pickled objects in jinja2 I use Flask and Jinja2 to display data that is stored in a Postgres database. How can I load the data from the database to a list that I can use in Jinja2 templates? I currently have a Model: class my\_object(db.Model): id = db.Column(db.Integer, primary\_key=True) description = db.Column(db.String(256), unique=True) And the Flask view: @app.route('/my\_object\_table', methods=['GET', 'POST']) def my\_object\_table(): if request.method == 'POST': form = MyObjectForm(request.form) if form.validate(): my\_object = my\_object(description=form.description.data) db.session.add(my\_object) db.session.commit() form.save = False flash('Your object has been added to the database','success') return render\_template('my\_object\_table.html', form=form) return render\_template('my\_object\_table.html', form=form) else: form = MyObjectForm() return render\_template('my\_object\_table.html', form=form) And my Jinja2 template: {{ form.description }} add {% for my\_object in list\_of\_objects %}
