Tenofovir is a nucleotide reverse transcriptase inhibitor (NRTI), used in combination with either emtricitabine or abacavir to treat HIV infection. Tenofovir use may be limited in the elderly, due to a higher risk of renal toxicity. Other NRTI, such as zidovudine and stavudine are used in the elderly, but in combination with less toxic NRTI (lamivudine and abacavir). Little data are available, regarding the effect of age on the efficacy of the different NRTI and in particular on the response to tenofovir use. To assess the effect of age on e79caf774b
