History The free version, Photoshop Elements, originally began as a 64-bit word processing program in 1987. In 1999, the 32-bit version was released. The download was renamed Photoshop Lightroom in 2004, and then renamed to Photoshop Elements in 2013. Photoshop was first launched in October 1990 by Stephen Cobb, the lead programmer who took the program from a graphic design program, and began to make it into a raster editor. While the first version was focused on color correction, it soon began to include manual tools and template creation. By 1992, it had been bought by Macromedia, and continued to grow in popularity throughout the 1990s. Photoshop started to rival Adobe Illustrator and The GIMP as a professional program. 2003 saw the release of Photoshop CS, and a new UI. The most notable feature in that release was the blending modes that enabled transparently editing one image over another, creating composite images. Also included were many new and powerful tools, such as the Liquify filter, Photo Merge, and the Clone Stamp tool. In 2008, Photoshop had been around for 20 years and had a 90 percent market share in the industry. That same year, Photoshop CS3 was released, with feature additions such as Auto Fix and the Liquify filter. Most of the features in the 2010 release, Photoshop CS4, were required to be included in the two previous releases. Yet another new feature, HDR, allowed better manipulation of photographs, and a new UI that was much more accessible to everyday users. In 2011, Adobe released Photoshop Lightroom 1, replacing the Photoshop version's name. Photoshop CS4 was renamed to Photoshop CC in 2014. In 2012, Photoshop and Lightroom made the jump from 32-bit to 64-bit applications. In 2013, Photoshop CC was launched. It included a number of new features such as Content-Aware Fill and the Smart Brush. The new features in 2014, Photoshop CC 2015, included object-based masks, a brand new font manager, and the Mini Bridge, Photoshop's first cloud storage option. Features Because of Photoshop's strong link to the digital image industry, it has to be compatible with various industry-standard file formats, or vice versa. Adobe offers Photoshop for Mac (version CS6), Windows, and iOS (iPhone, iPad, and iPod touch). Original Photoshop is free to download and includes a basic image

The present invention relates to a stabilizer system for determining the presence of air or other gas in a surrounding environment. More particularly, the present invention relates to a stabilizer system which uses a high density ambient fluid (such as oil) to be used as a stable reference for comparison with fluids contained in the surrounding environment. It has been long known that certain types of fluids, when placed in a stable reference position (as by means of a fixed interior reference surface which is completely immersed in the fluid), can accurately indicate the presence of air or other gases in the fluid or surrounding environment which has come in contact with the fluid. This is true whether the fluid is a liquid or a vapor. In U.S. Pat. No. 3,230,632, there is disclosed a stabilizer apparatus for indicating the presence of air or other gas in a surrounding environment. This apparatus has a pair of opposed ultrasonic transducers which are immersed in an oil bath. The transducers are energized by the application of a predetermined frequency high voltage pulse signal to the transducers. When air or other gases are in the oil bath, ultrasonic energy is reflected back at the surface of the oil and at an interface between the oil and gases which is separate from the oil surface. The reflected energy changes the frequency at which the transducers operate and the energy is measured, so that when the predetermined frequency is reached, an alarm signal is given to indicate the presence of the gases or air. In the present invention there is provided a stabilizer apparatus which operates on a substantially different principle than that of the above-identified U.S. Patent. In the present invention, there are provided means for pumping a very large flow of oil into a secondary chamber of significantly larger volume than that of the primary chamber containing the ultrasonic energy. The flow of oil is conducted through a conduit where it is mixed with a very small volume of the surrounding environment. When there is the presence of air or other gases in the surrounding environment, it will enter the open end of the conduit and mix with the flowing oil. The oil which is pumped into the secondary chamber is of a density which is higher than the oil surrounding the apparatus, and any volume of gas which enters the oil will result in a relatively large variation in density between the flow of oil and the surrounding environment. When the high density oil and the surrounding medium have the same acoustic impedances, the oil will travel a longer path through the medium to reach a receiver than the gases and it will

A day after the Los Angeles Kings' young core group of players missed the ice in a preseason matchup with the Edmonton Oilers in Campbell, Alberta, the team is set to arrive in Edmonton and hit the ice at Rogers Place for what is sure to be another exciting showdown between two young teams. Here are six things to know for the game Friday: 1. Gaborik Back To Fire It's been a long wait to see Saku Gaborik return to the Pacific Division after the past three seasons with the New York Rangers, but after playing on a line with Anze Kopitar and Dustin Brown, the hockey writer is ready to see what the 34-year-old forward can bring to the table. "It's going to be fun," Gaborik said after practice Thursday. "Maybe it's different, but it's not going to be any different than the last few years I've been in this division. The standings, you have to win. But it's definitely going to be fun to go against the other teams. It's going to be good." Gaborik missed most of the 2013-14 season with a torn knee ligament and has only played in 21 of the past 30 games for the Rangers this season. The center will most likely pair with Kopitar in the offensive end because the team needs a powerful presence on the top line, but he said he's not focused on that line and instead just wants to "make plays and score goals." 2. Like Trying To Read The Wild "It's going to be fun," Gaborik said. "It will be good to play in the (Pacific) Division. It's a good division and I look forward to the challenge. "I'm not going to play the first game against anybody. I'm going to play the first game against the new-look Kings. Then we'll see who we'll play the rest of the way and that's the only thing that counts." The Kings open the season with the first two games in the West against the Wild, then play the Chicago Blackhawks on Oct. 9 before opening the Northeast Division on Oct. 13 against the Montreal Canadiens. If Gaborik plays well, he could find his way onto the first line, while Brown and Kopitar could alternate games depending on who has played better. 3. The Rematch Five months after the Kings' young players were on display in a 4
