NEO Hex Editor v.4.0.3.3 · VMware vCenter Converter CD · 's and then taste them. The delectable flavor will be evident and tell you just how good they are. ## Rolled oats This easy meal is hearty, and can be easily reheated. Simply mix up the oatmeal and apples, and then set aside until reheated. This will make a great breakfast dish that's not too heavy. ## Peanut butter and jelly I know what you're thinking, and I don't blame you; the thought of eating jelly on its own sounds unappetizing, especially if you're eating it for breakfast. But trust me, it's good! It's even better when you add jelly to oats. I like using Nesquik for this purpose, but it's not mandatory. You could use your favorite jelly, or even use the jelly used in the rolled oats recipe. Just make sure you allow extra time to prepare and eat the oats after the jelly has set. ## Yogurt Unlike the other recipes listed here, you can actually eat this for breakfast on its own. It's a great way to add a little more protein to your daily diet, since yogurt is filled with milk protein, and studies have shown that the consumption of milk and dairy products can help those with type 2 diabetes. Yes, breakfast and type 2 diabetes have a lot in common. ## Three simple foods Of course, no meal or breakfast is complete without salt. I use Himalayan salt, but any type of salt will do. And like most people, I enjoy a little fat, so I use just enough olive oil to allow the salt and vegetables to cook to full, softness. You could also add a small amount of butter, but please, not on an empty stomach, unless you're trying to lose weight! It's okay to have a little bit of oil when you're eating healthy foods. You can use the same foods to prepare all three meals, and that would help make your daily routine easier. If you plan your meals to be fairly similar, you'll save time and energy trying to come up with something new each time. I will say, however, that you will save time if you prep the lentils and quinoa in the morning before you go to work, just like you should for the rice and the oatmeal. ## Applying the

The number of coronavirus (COVID-19) cases in Russia rose to 19,044 on Saturday, the Russian Emergencies Ministry's press service reported. The ministry said on Saturday that 1,166 people were diagnosed with the disease abroad, 1,109 of whom were patients who were diagnosed abroad and 52 of whom were medical staff who tested positive in Russia. There were also 20 deaths due to COVID-19. Earlier, the ministry had said that Russia had recorded just two deaths due to the coronavirus in the previous 24 hours. Viscosity of solutions of highly concentrated antifreeze protein from Antarctic nototheniid fish is strongly affected by ionic strength. The solubility of the antifreeze

protein (AFP) from the Antarctic nototheniid fish, fish nototheniids (common name: icefish), and the viscosity of its aqueous solutions in which the concentrations were higher than 40% were investigated. The value of the intrinsic viscosity (η) of fish AFP was found to be greater than that of bovine AFP, and it was independent of temperature. The apparent viscosity of fish AFP solutions with various concentrations at 20 degrees C showed a strong ionic strength dependence. The viscosities of the fish AFP solutions containing 20% NaCl were considerably smaller than those for bovine AFP at the same concentrations. At 40 degrees C, the viscosities of fish AFP solutions containing NaCl were equal to those of bovine AFP solutions, but the viscosities were remarkably lower than those at 20 degrees C for all NaCl concentrations. The fish AFP-conductivity curve at 40 degrees C also showed a weak ionic strength dependence. The substitution of NaCl with CaCl₂
