After the success of AutoCAD, Autodesk released AutoCAD LT in March 1984 for entry-level drafting. As of 2011, AutoCAD LT was still available as part of the original perpetual license program, but the Microsoft Windows, Android, and iOS editions of the software were also available to the general public. The new software is based on the stable Release 1503 version of AutoCAD, which was released in 2001. AutoCAD LT supports one user and is aimed at students and hobbyists. In 2009, Autodesk released AutoCAD 360 for the Windows Phone and Windows 8 operating systems. At the 2011 Beijing Auto Show, Autodesk announced the release of AutoCAD LT for mobile devices, starting with the Android platform. Use AutoCAD in business and industry The common uses of AutoCAD are design and drafting, space planning, 3D modeling, landscaping, MEP (building), CAD conversion, GIS, animation, and simulation. More complicated users, such as architects and interior designers, use more advanced software. Hobbyists and others who use only the basics of AutoCAD use the most basic version of the program, which is AutoCAD LT. AutoCAD LT is a self-contained desktop app for Windows, as well as the Android and iOS platforms. It is widely used in schools, as well as for hobbyists and by CAD-inexperienced individuals. AutoCAD LT is designed for use with inexpensive CADD (Computer Aided Drafting) hardware, ranging from the first generation of PCs, such as the first IBM PC, to simple graphics terminals. Thus, Autodesk positions AutoCAD LT as a starting CAD program for the non-professional. Several software tools and plug-ins, such as AutoCAD 360 Design, allow AutoCAD to be used for more complex, professional design work. Customization and automation via plugins For many years, AutoCAD has supported some degree of customization and automation via plugins. However, with the introduction of the Visual LISP (VLL) scripting language, there is much more potential for script customizing and automation. In 2006, Interval Research reported "AutoCAD has more than 180,000 active installers, a number that is

expected to grow exponentially." The AutoCAD Application Programming Interface (API) includes interfaces for customizing AutoCAD by programming AutoLISP, Visual LISP, and, more recently, JavaScript. AutoCAD 2016 introduced a new Application Programming Interface (API) for customizing AutoCAD using Javascript. AutoCAD also offers a plugin framework which is a mechanism for building add-on applications for AutoCAD. Plugins are written in C++ and Visual LISP. AutoCAD 2016 introduced a JavaScript plugin. Command line AutoCAD, via its command line, can be scripted. This allows complex features to be automated, e.g. part generation, sequence creation, and text. Supported languages AutoCAD supports scripting in AutoLISP, Visual LISP, and JavaScript. AutoLISP, also known as AutoLISP, is a scripting language developed by Autodesk and, by extensions, some universities. It is a functional, object-oriented, interpreter-based language with variable type support. Visual LISP is derived from AutoLISP. JavaScript is a de facto standard and is widely used in web browsers. AutoCAD LISP (List Processing) is the oldest of the three scripting languages. It has been superseded by Visual LISP. The original interface to the language, LISP, was created and designed by Paul Engel, a programmer and author who lived in London. LISP was an interpreted language. The first version of Visual LISP was based on LISP, and it has also been called AutoLISP. The name Visual LISP was chosen because it "advocates simplicity, and the fact that the LISP programming environment is based on Visual Basic" (in 1985). Visual LISP was originally developed by Jack Warner who was a programmer at Autodesk, and who lived in Toronto. Visual LISP is an interpreted language, and it supports variable type support. Visual LISP is documented in Microsoft's MS ca3bfb1094
