On page level only the text can be loaded in the html page. Lumion 3d material library download but with a Magento theme the text is loaded at as well. How can I load text inside a Magento web page? A: I had the same problem and it happened because I was using Material Library and Theme Designer of the Theme I was using was too large so it was extending over the column div you are using. There are two ways to fix it. 1) Open HTML Explorer in Windows and look for the div you want to load the text in and remove it, remove it from all the pages you want it to be displayed in. 2) Go to the Theme Designer and go to Template Settings. Now find the div you want to load the text in and set the div to do not expand over the content in the column. C. K. Premkumar C.K.
