Transformation of probability density function I have a probability density function that is given by a constant, $p(t)$. It does not have a closed form solution; I can calculate it numerically given t . But I need to determine the transformation of this function. I do not know how to do this. Can you please

suggest a method? I am not looking for a closed form solution. A: To find the transformation you need to find the CDF, which is the inverse of the probability density function: $F(x) = \int_{-\infty}^x p(y) dy = 1 - \int_x^{\infty} p(y) dy$ In your case $F(x) = 1 - \int_x^{\infty} p(y) dy = 1 - \int_x^{\infty} \frac{1}{1+e^y} dy$ $F(x) = 1 - e^{-x} + x$ Group calls on both US and China to support Myanmar's peacemaking BY CAROLINE MILLIET YANGON — An international human rights group called on the United States and China on Thursday to pressure military leaders in Myanmar to find a peaceful solution to the state violence that has engulfed the country in the past three months. In a report, the rights group said ethnic-based fighters “appear determined to exterminate each other’s communities,” adding that ethnic divisions are deepening and information about the conflict is difficult to verify. A total of about 600 people have been killed. Since a new government was formed in May in Myanmar after decades of military rule, the country’s army has launched a brutal campaign against the country’s ethnic minority communities in the northwest of the country. In a statement released this week, the United Nations special rapporteur on human rights in Myanmar said that the military had carried out “massive, systematic and widespread” crimes that have included “acute and significant violations of human rights.” Aung San Suu Kyi, the de facto leader of the country, has appeared largely powerless to influence events. In comments to a fellow Nobel laureate earlier this week, she insisted that she could not be blamed for the violence, saying that she 6d1f23a050
