The comparative in vitro antimicrobial activity of ciprofloxacin, ofloxacin, and sparfloxacin against 1,466 clinical isolates of *Pseudomonas aeruginosa* was evaluated by the agar dilution method. The low MIC90 values (ciprofloxacin, 0.25 micrograms/ml; ofloxacin, 0.5 micrograms/ml; sparfloxacin, 0.5 micrograms/ml) of these antibiotics against *P. aeruginosa* indicate that all three compounds are potent against this organism.

Montreal's McGill University is reeling after a book penned by university legend Stephen Hawking was stolen by students. University officials said Wednesday they believed the theft occurred sometime on Tuesday. The book — published in 1962 — is a compendium of essays on philosophy, religion and spirituality, which Hawking is most famous for. The book, named *An Introduction to Philosophy*, is valued at about \$10,000. In an interview with CTV's Kevin Robertson, Chief Operating Officer Robert Aubin said the book has been sent out to the school's library system. "The library has been notified, and they are doing everything possible to retrieve these books." The school said it believes it will be able to replace the books if they are recovered. Hawking, the renowned British theoretical physicist, died on March 14, 2018.

Molecular incorporation of (thio)urea building blocks into peptoid oligomers is described. The synthesis of (thio)urea-containing peptoid oligomers is based on regioselective S-alkylation of peptoid oligomers. Our synthesis provides access to a wide variety of peptoids having (thio)ureas at various positions of the oligomers with excellent yields and high regioselectivity. These (thio)urea-containing peptoids maintain important biological properties such as their hybridization stability to nucleic acids, their binding affinities to proteins, their conformational stabilities, and their activities.

The synthetic methodology can be further applied to various kinds of functionalized peptoids.Q: Powershell / PowerShellPad Regex replace I am attempting to do a simple RegEx in Powershell that will do the following: Search for a set of strings (let's say \$foo) Replace anything that matches the sets of strings with a new string (let's say \$bar) This seems like such a simple issue, so I feel like I'm missing something silly, but I don't know what it is. For some reason I cannot find any examples that do this with a newline in between the set of strings. What I'm trying to do is just find a word and replace it with a new word. If I run this: "\$foo\$new \$bar" -replace "foo","bar" I get bar which is what I want, but I can't seem to get a newline. I have tried a few different things, including:

"\$foo\$new\r\$bar" -replace "foo","bar" "\$foo\$new \$bar" -replace "foo","bar" No matter what I do, I just never seem to get the correct output. Any ideas? A: Using both -replace and -split you can
