**Alfa Laval Mapx 207 Zip**

---

We have succeeded in developing, through our careful research, our superior Modular Oil Separator (MAPX-MOPX) and we have been supplying it to our customers in Australia and overseas, for several years. With the evolution of the mechanical parts and the new way of processing technology, we have introduced the new improved version of the MAPX series i.e. MAPX-MOPX 207. Applications Alfa Laval MAPX-MOPX 207 is a commercial separator device which is used to extract oil and sludge from the Marine diesel, Biodiesel, Lubricating oil, Distillate and Hydraulic oil. The Alfa Laval MAPX-MOPX 207 is primarily made up of plastic for simple maintenance. The Alfa Laval MAPX-MOPX 207 is used in the following facilities: Marine, Police, Fire, Railways, Port, Refineries, Marine, Oil and Gas, Power Stations, Automotive, Agricultural, Paper & Printing Mills and Decks. Industrial applications of Alfa Laval MAPX-MOPX 207: • Marine • Police • Fire • Railways • Port • Refineries • Marine, Oil and Gas • Power Stations • Automotive • Paper & Printing Mills • Agricultural • Decks Alfa Laval MAPX-MOPX 207 is used for separation of oil and sludge from the Marine diesel, Biodiesel, Lubricating oil, Distillate and Hydraulic oil. Our Alfa Laval MAPX-MOPX 207 is a high speed device equipped with a disc bowl centrifuge. Our Alfa Laval MAPX-MOPX 207 is 60 to 70-percent less expensive than any other separator and recondition unit. We are capable of offering the Alfa Laval MAPX-MOPX 207 in the quantities required by our customers. Applications

## Alfa Laval Mapx 207 Zip

CE-documented, evacuated and filtered, the Alfa Laval CULSAS-6500S is designed to reduce listeria to below the microbiological limit of detection within 5.0 log reduction in real time during the production of frozen beverages. As an added benefit, it can also be used for the processing of pasteurised, unfrozen and semisolid beverage products. The Alfa Laval CULSAS-6500S is based on the high performance mini-machines (HPMM) technology developed over the years. The CULSAS-6500S provides accurate, consistent and reliable bacterial reduction levels across a wide pH and temperature range. After experiencing customer demands for higher capacity in the beverage industry, Alfa Laval chose to develop the CULSAS-3500S, which was designed for large-scale and efficient use in class-leading production lines with capacities of up to 80,000 litres per hour. To ensure full compliance with EN-43917 requirements, the Alfa Laval W-3300VD features new technology for the first time in the beverage processing industry. As well as being used to provide optimal CO2 removal and reduction in shelf-life ready products, these new technologies can be applied to the processing of many different shelf-life ready products. Used- Alfa Laval Solid Bowl Decanter Centrifuge, Model CBDNX-441B-31G, 316 stainless steel construction (product contact areas). Maximum bowl speed 4200 rpm. Operating G force 3193. Conveyor, 360 degree solids discharge ports with wear inserts, base, casing, 70 kW (94.6hp) main drive motor, feed pipe, safety guards, gearbox. On more info..
