I am a Lightroom user, and have been using Lightroom ever since it was initially released back when it was a part of the Adobe Acrobat line of software. Lightroom was Photoshopped into the Adobe family with the Photo Downloader 4 application in 2005. I even had the original Adobe Photo Downloader which allowed you to download pictures directly from a scanner via a PC. Today, Lightroom sits well between Photoshop and Photoshop Elements in the Adobe product lineup. That said, I am not a huge Photoshop user. To create a new workspace, browse to the workspace folder location (your desktop, for example). Windows users will see it in the Windows explorer folder. For a Mac user, it's usually called "Desktop" or "Documents". Create the project folder on your desktop and drag it to the laptop or desktop where you want to work. Next, open Photoshop and you'll see your new workspace on the left side of the screen. You can work with any of your projects at this time by selecting the drop down list there that lists your folders. To import a new file, use the "File > Open" option. You'll see the file you need to edit or combine with the existing project elements. Use the arrows to navigate to the folder location of the image you'd like to import, and click Open. Once you've imported the image you want, it will import into the active workspace. You can also start a new file from scratch by clicking the Create New File button in the toolbar and selecting a file type, any of your existing projects will become the active workspace. Now that you have your workspace set up and the right files loaded, you can start editing. The first editing step for this exercise is the 'Basic Image Adjustments.' After you have all your basics taken care of, you'll move on to adding elements and colors, and then your images will look almost finished. To begin, click the Brush tool icon and select a brush type. You can choose any of the brushes you have installed on your system from the drop down list. Click inside the image and begin painting. Your brush will have a default setting of 100% opacity. To change the brush opacity, right-click inside the image and select Use Brush Preset.
