MUSIC CONVERTOR EXE is an easy-to-use music conversion tool for Windows. It supports batch conversion from any music file formats to various audio formats including MP3, WMA, WAV, AAC, MP2 and OGG. It can also convert one audio or video file to a variety of the supported video formats. * Add music files to the conversion queue by using either the file browser or "drag and drop" method. * Music conversion settings are saved automatically so you can set them again without having to load the program. * The "Settings" area allows you to change the audio and video compression quality, disable the program from automatically starting conversion, specify a tool to automatically convert files from a specific folder, and more. * Music files can be selected for conversion in a number of ways. You can select a set of music files by using the file browser or "drag and drop" method. You can convert all music files of a specific folder or a file (not a folder) to the same folder or to a different subfolder. You can convert files from a specific folder to a custom folder or to a destination folder named "Converted". You can also convert audio files to a standard audio CD, copy music to iPod, preview the original songs in a built-in player, and more. * In addition, you can adjust the audio and video compression quality, disable the program from automatically starting conversion, specify the action when the output file already exists (e.g. overwrite, create unique name), and set the tool to automatically convert files from a specific folder. * MUSIC CONVERTOR EXE offers a simple interface and is stable, clean and requires only a low amount of system resources. What's New In AllMusicConverter?

An extremely easy-to-use application for encoding media files to various audio and video formats. Features: Audio and video formats: AVI, WMA, WMV, MP4, MP3, MP3, The application is intended for Mac OS X only. P.S.: Windows is currently in beta testing. P.P.S.: You can download the beta version of this application from here: Usage: Run AllMusicConverter from the Utilities folder, drag & drop media files into the main window or open the file browser and choose the files from there. Once you have added the files to the list, use the context menu to choose the conversion settings you need. The application will automatically start encoding the files to the selected settings. You can add multiple files at once via the main window, and all conversions will be executed sequentially, one after another. There is no batch processing allowed. The files will be encoded as if you dragged them to the main window. By clicking on the Files button you will see your media files in the List pane. In the Settings area you can adjust the compression quality. You can disable the program from automatically starting conversion. You can also choose to automatically save the converted files to the same folder as the original files. You can choose to automatically convert files from a specific folder. You can change the "Convert to" action when a file already exists (e.g. overwrite, create unique name, etc.). You can set the interface language. You can preview the original tracks in a built-in player. You can copy the music to your iPod. You can burn an audio CD. You can preview the original tracks in a built-in player. You can set the default "Open" folder. You can adjust the sample frequency rate, sample format, resolution, frame rate, frame size and channels. You can choose the file compression method: LZW, JPEG, Zip, GZip, BZip2. You can enable or disable fast hard drive access. You can change the output file extension. You can enable a pitch correction (volume) effect. You can enable a 3D sound effect. You can enable a 3D sound effect (volume). You can adjust the compression quality. You can apply "Ogg Vorbis" "Vorbis-Flac" "MP3-Lame" "Musepack" "Tomahawk" "LAME APE
