A: Marijn Haverbeke's markdownlint utility should do the trick. 2d 1309, 1313, fn. 4 (1st Cir.1988), affd. without opinion, 493 U.S. 972, 110 S.Ct. 478, 107 L.Ed.2d 462 (1989). [5] These standards are not the only ones that a trial court should consider in order to conduct the trial in a manner which is fair and impartial to the parties, in the interests of justice, and expeditious. In particular, should a trial take an exceptionally long time in a civil case, it is also appropriate for the court to consider whether the issues in the case have any common characteristics or facts (such as standard of care, duty and proximate cause) or whether there are special circumstances or reasons why some delay is necessary in the trial of this particular case. Whether a delay is appropriate for that purpose is a decision which lies within the discretion of the court. See, *Corder v. Bowman Transportation, Inc.*, 104 N.H. 314, 315, 187 A.2d 798 (1963). Q: Should I use a single app in my app if I use multiple app in 1 app in iOS I have 4 different apps in my app. In one app i use a navigation controller to navigate from first view to the second view and in second view I want to segue into the 3rd view. And in third view I want to segue into the fourth view. Now this works fine and I can go to the different view through the navigation controller, but the problem is that my app has 4 activities and I use one AppDelegate class to manage these 4 apps. Should I split my apps and each app have its own AppDelegate class or not? I have just used the same AppDelegate class for these 4 apps, so what

Shiba is a markdown preview utility that highlights the changes of a specific document in realtime, and automatically executes its lint engine to detect possible errors. PROS: Can be run on all major OSs and does not require installation or configuration. Can display the outline of window and copy the Markdown content to the clipboard. Can search for text in the preview window. CONS: Its functionality is somewhat limited and it lacks linting functionality. Its Markdown file must be saved as XML. Top 5 Popular Markdown Editors on Mac Best Mac Markdown Editors Best Mac Markdown Editors: (1) Draft | Best Draft is one of the most complex Markdown editors for macOS. With it, you can create all the elements of a web page: headings, paragraphs, lists, images, tables, etc. Users of Mac will be pleased to learn that Draft, a free online-based Markdown editor, supports drag-and-drop, syntax highlighting, support for code snippets and multiple fonts. The app's main downside is that it does not offer syntax highlighting or customizable columns. Moreover, Draft is not free, and requires a paid subscription to access the full functionality. (2) Evernote | Evernote is a tool for creating notes, class notes and save them in a standard text file or in a notebook. The app supports Markdown, as well as Evernote's own template, and syntax highlighting. Additionally, it includes clipboard, search and web clipper features. Evernote, one of the most popular note-taking apps for Mac, is free. If you'd like, you can also pay \$5.00 or \$10.00 for a one-year or three-year subscription respectively. (3) StackEdit | StackEdit is a tool for creating lists and snippets. With the latter, you can also insert images, tables and code. The app also supports tables of contents, word and character counters, and a contextual menu. Unlike Evernote, StackEdit does not allow drag-and-

drop functionality. Additionally, it does not support syntax highlighting or customizable columns. You can buy StackEdit as a yearly subscription for \$12.99 or \$ 2edc1e01e8

## What's New In Shiba?

Shiba is a modern, lightweight markdown preview utility that not only displays the changes of a specific document in realtime but it also points out possible errors, with basic linting capabilities. Runs on all major OSs out there and does not require installation The first thing you should know is the fact that since its built with Electron, Shiba works on all major OSs, namely Windows, macOS and Linux. Secondly, you will be happy to hear that the app does not require installation or any type

of configuration on your part. To get started with it, just click its executable file from the provided package and either make it watch a directory (by clicking the Folder-shaped button from the minimalist sidebar) or allow it to continuously monitor a specific file by dragging and dropping it on its main window. Simplistic GUI and straightforward functionality Evidently, after this, each and every modification performed to the Markdown file is automatically highlighted by Shiba within its simplistic interface. Considering that Shiba runs its linter engine automatically, each time it picks up errors or slight-mistakes it lets you know this fact by changing its button's color from yellow to red. By clicking the aforementioned button, you can get access to all the details behind the errors via a retractable side panel. Its somewhat limited functionality also includes the possibility to copy the outline of window (basically it copies the Markdown content to your computer's clipboard) and to search for text. Live markdown preview app that might seem obsolete for some while others might appreciate its simple functionality Taking everything into consideration, it is safe to say that Shiba is a smooth-running application that provides a straightforward way to preview your Markdown documents and their changes in realtime, as well as find possible errors thanks to its built-in lint engine. Before we end, we cannot but point out the fact that in spite of everything it offers, its usefulness is somewhat constrained since almost all modern Markdown editors bundle preview capabilities. Nevertheless, users that prefer editing with the help of the Markdown language while using simple text editors will surely appreciate Shiba's worth.
