When I close the folder, Lightroom automatically creates a new project. From now on, all my images are easy to find. As the smartphone revolution continues, millions of new digital cameras are being marketed. But in the age of the smartphone, many users struggle to figure out their best options for dealing with all of this digital content on their phones. There are a variety of applications and free or cheap photo services that let you manage and store photos, but there's now a new player in the market—Adobe is now unveiling Paint. It's a suite of apps that brings its core Photoshop tools to mobile (for Windows, Mac, and Android). With Photoshop's new features, you can now edit moving images or create sequences to do just about anything part of the way you can with a computer. By adding key features like Smart Objects and support for plug-ins, the program lets you go beyond what you can do with your mobile. That's a huge leap forward, and it lets a lot of people shoot in less-than-optimal conditions, making their images a lot more usable. If you enjoy creating your own graphics, you'll love this new version of Adobe Photoshop. Element 4 is packed with major improvements. The new tools—like easy-to-use mobile cameras and filters—make this the best version of Photoshop yet. The program has been enhanced for mobile users. You can now create powerful images on the go, no matter where you are. Use the keyboard or your device's track pad or stylus to edit out blemishes, crop, and clean up images. Switch to the Mobile app for iPhone, Android, or Windows 8 to edit your photos. (I reviewed this version of Photoshop here.)
