While in the past Photoshop was an app that users generally installed on a computer and used offline with a single monitor, Photoshop now has the internet browser as an addition to the modern image editing toolkit. With Share for Review and other new features, Photoshop now can be used in a browser in new ways, so that you can use a touch screen in Photoshop on a desktop screen while on the go. The camera in your smartphone can be used to access your Photoshop assets as well. The most striking addition of Browser is the ability to use Photoshop in ways that were previously only available in the app. Users can now, for example, edit and organize images in Photoshop in a web browser. Organizing select images for editing is even easier with a new Organizer in Photoshop. The Organizer enables you to easily turn multiple files into a single selection, and even create a custom selection through a series of steps that are guided right into the Organizer window. The Organizer leads to new Organizer in the browser, allowing you to create similar selections and save them to a web browser. You can even use this selection right in the new Editor in the Browser. The rest of the Photoshop interface is now present and operational just as in the desktop app. This includes the ability to customize the workspace, control elements of the UI,

and use the classic and more modern tools in a variety of ways. “Users have told us for a long time that they want to use Photoshop the way they edit images,” said Melissa Gerrits, product manager for Photoshop on the web. “The new experience on the web takes that to a new level by allowing users to create and edit in the browser on any device using a variety of mobile and desktop interfaces. ”
