The interface and backend of Photoshop is much, much better now with the help of cloud services. I don't recommend upgrading if you don't have access to the web. One example is to move the CC to PS's web service. So with that, do you like this new version? Now you can make adjustments to a range of pixels at once. Not all adjustments work in this mode, but it does sometimes work great. The interface for this feature is still incredibly awkward, though, and there's no easy way to switch modes. The custom tools have been also updated with a new "Paint Type" option that can help save extra color adjustments and the new "Create Mechanical" brush type provides a new stroke for drawing letterpress or ink type. Have you ever changed your mind about how something is going to be in the end? Does anyone do that easily as we do? Such a part of the editing process is easily done with the new Liquify tool. That's right, the cumbersome tool is here for photo restoration. Transforming your image to easy and smooth is easy with the Liquify tool. Besides, the new Magnetic Lasso tool will make your life easier and just faster. Adobe Photoshop CC also includes the new, and exclusive to this update "EdgeLite" technology. It takes advantage of the new GPU (graphics processing unit) in your machine and it brings the lightning fast performance of v.24 EdgeAI even to the older Photoshop version. YouTube has officially launched its latest update for video editing and sharing. The latest update brings new tools into the Photoshop and features a greatly improved interface, but it will only work with certain platforms. Another important improvement is the content-aware fill tool that will find areas within your image that have similar colors and will fill them automatically. As a result, you'll get a more natural look to your images.
