One of the issues I had with most of the earlier previews of the Mac versions of Lightroom was the lack of plugin compatibility. It has been a major problem in Photoshop, too, but Adobe has made strides with the release of its new versions. One of the features I am most excited about is the list of apps and tools from which you can process an image. This is a great way to keep track of plugins and other applications and gather them in one place. It's great to be able to incorporate Adobe tools with third-party plugins. Use the free trial of Adobe Lightroom to simultaneously process a large volume of RAW images on your desktop station. Welcome to the future. Easily one of the most powerful plugins ever created for Photoshop, Acorn Video makes it possible to cut projects together from a variety of sources, including video files, audio files, audio slideshows, and any other content that's stored in Adobe Flash. The plugin integrates with Photoshop CS6, and won't work with earlier versions of the program. It also seems to run on Windows 7, to which you can download a portable version for use on any computer. Of course, the plug-in might not work on all versions of Photoshop, but at the very least, it appears to be stable and reliable. One disappointment about the video version is that there is no support for the use of transitions, although those can be used in conjunction with video files. (The plug-in does save the transitions, so you can use them in other projects.) In essence, the great thing about Acorn Video is that you can quickly incorporate any video content with Adobe Photoshop. This makes the editing process much easier and quicker, and you don't have to rely on someone to convert your media. If you need to do that, it's also possible to export the frame data into a Photoshop project, but this is much more time-consuming than using Acorn Video. It's also a great solution for simpler projects or as a way of quickly creating a video montage sequence.

What is the difference between Adobe Photoshop and Adobe Lightroom?

First, the difference between Lightroom vs Photoshop. Photoshop is a photo editing and manipulation software while Lightroom is an app that allows you to create and edit photos. Adobe Photoshop and Lightroom are both used to achieve different things. Lightroom is simpler to use and unique in its own right. At the moment, Photoshop is more popular because the features are far more extensive. For the most part, Photoshop is for the most part a photo editing software. On the other hand, Lightroom can be used for retouching, adjusting contrast and lighting and in some cases can be used for photo manipulation. If you have no interest in photo editing then Lightroom is the way to go.
