If you have this, and if you have a chance to give it a try, then you'll discover that Lightroom can quickly become your image editing tool of choice, whether you're planning to move on to other applications—or not. Lightroom CC is released and you can check out the software for yourself. Things are still a bit buggy but they're sure working on that right now. I noticed that Help is not really in English, though. On the other hand, you can read manuals if you need to. The appeal of Photoshop is not an obvious one. Most people start with the basic tools. O.K. Here is my first problem. If I run "dpkg-reconfigure locales" under the terminal I get a message saying that "Directories are not currently available in this locale, please specify a directory using the --locale option." So I searched through the terminal list of available commands and ran "sudo locale-gen en_US.UTF-8" which connected me to a couple of pages of description about how to select what language I want. I then ran "sudo locale-gen en_US.UTF-8" a second time which gave me a screen describing how to do some pretty fancy things. Then I went and did what I suppose was the most basic of all the instructions. "sudo locale-gen en_US.UTF-8" again and it worked. I went back in to the terminal and this time I ran "locale" and it reported that the language I selected was en_US. It looked like I have been able to change my locale. How can I get confirmation of this? Also I have not been able to change my keyboard layout selection. My last question is that I have read that you can change the default applications in OS X 10.7 Lion by going into Preferences/General/Default Applications. How do you do that?
