The program's Layout and Effects tools give designers and artists the most powerful production-grade graphics tools found anywhere. And iOS 12 includes the same CameraKit framework that enables smart camera access to all your photos and video clips. You can apply multiple vectors, texts, borders, and gradients, and even change the opacity, blend mode, and color of a layer to create truly unique and beautifully specific art. In the 3D workspace, you can drop and animate 3D shapes. And then there's the Warp tool to create stage-setting optical illusions. The program's Photoshop Camera Presets and Camera Match feature, which is based on Face ID and works best with live video, allows you to automatically import video taken by the built-in camera and adapt it for use with Photoshop. (Not a replacement for your camera for taking still images, though.) MacOS Catalina will include a feature that allows you to share Photoshop files and collaborate with others using Adobe Workflow. This obviously won't work with files you've saved to an iPad Pro, since iOS 12 won't support sharing over the File Stream, but it should work with files from macOS workstations if you can get to those. If you're on a supported Mac, you can invite someone to join a document as a reviewer. You can also collaboratively edit the file, just as if you were working on a Mac. The person viewing the file doesn't need Apple's AirDrop app or the Adobe Creative Cloud subscription to work on the file.
