The app has been very stable for me and Adobe's touch gestures are very responsive. I think the touch gestures performed together with the new crop, rotate and perspective tools make the workflow with Photoshop much more efficient. Another nice new feature is the new Lookup Panel. Very accurate. Having tried the new crop tools, I definitely prefer Curvature Crop, Perspective Crop & Recovery Crop as compared to the standard Crop Tool. I think these tools might become an absolute essential in Photoshop. It makes the final result highly predictable. Second, **Adobe Photoshop Features** offers some of the advanced tools including **Automate, Layers, Selections, Spot Healing Process, and Rasterize**. The **Automate** function allows automatically correcting the problems with the image, layer, and layer mask. It also includes the ability to arrange images, create graphics, and generate code. The layer support tool also enables you to work with the layers on the digital image. Layers are used in the design areas. Layers are thought of as the deepest level of the image. The layer is basically the image information which is visible and hidden on as it can be changed and manipulated by other layers. For this purpose layers can be stacked on top of each other. Selections are one of the most popular features available on the Photoshop. Selections enable you to select the area or object on the image on which you want to apply an effect or modify. It allows you to specify the rule for the selected objects. Selecting one layer from objects in another layer and then move them around is another example of this.
